Wood Liner & Components

Industrial Chimney Company

EXCELiner Rigid Liner

EXCELiner is designed and approved to replace clay tile liners which have become cracked from age, misuse or damaged by chimney fires. EXCELiner can be used to reline masonry chimneys which have deteriorated due to chimney fires, spalled tiles, moisture damage or eroded mortar joints.

By reducing the chimney to the correct size for the appliance, EXCELiner improves draft, reduces fuel consumption and helps insure consistent operation. There is less creosote formation in a properly sized flue which decreases the probability of a chimney fire.

EXCELiner is listed to UL and ULC standards by Warnock Hersey Professional Services to be used as stainless steel liner in a new chimney, instead of a clay tile liner. Unlike clay tile liners, EXCELiner can withstand chimney fires without damage and comes with a lifetime warranty.

EXCELiner has continuous welded seams which means no leaks and no possibility of seam separation. All stainless steel components are made of type 304 stainless steel with factory hemmed ends for smooth, safe surfaces. No drilling is required. EXCELiner comes with pre-punched holes and all stainless steel rivets provided with each liner section.

To order, enter the appropriate chimney diameter size into the item number.

Dura-Blanket
Liner Insulation

High heat reflecting insulation for wrapping liner. Protects against heat penetration and contains heat within liner. A lightweight and resilient material. Excellent corrosion resistance and thermal stability. Low thermal conductivity and heat storage. Made of carborundum with increased fiber dimensions preventing airborne fibers. Carborundum Insulfrax Durablanket conforms to requirements for "Incombustible Materials" 1832°F continuous use limit.

Specifically Designed for Zero Clearance Applications

This premium liner application eliminates worries from questionable chimney construction or clearances and provides the ultimate assurance of a safe chimney. Recommended for unlined masonry chimneys or where clearances are of concern. Tested and listed to U.L. 1777 standards. Make sure your installation meets these tough "Zero-Zero" safety standards by using this fully listed system. The components below can be safely installed with zero clearance to the inner masonry and zero clearance to exterior combustibles despite a jagged or uneven chimney. Used only for zero clearance applications.

Termination Cap Options

The Zero-Zero application uses standard termination cap options, flex, liner and components for all items not listed on this page. Use oversize flat plate (listed on page 305) : for 6" system, use 7" flat plate; for 7" system, use 8" flat plate.

"Zero-Zero" Storm Collars

Adjustable shield that fits snugly onto the pipe redirecting the water away from the entire system. The band is wider in the Zero-Zero system in order to completely cover the air basket and insure protection of the overall system. For zero clearance applications.

M & G Dura-Vent

6" & 8" DuraLiner

DuraLiner ensures safe and efficient venting of heating appliances, while protecting the masonry chimney from the damaging effects of flue gas. It is the only factory-insulated product with zero/zero clearance for high heat wood-burning appliances. No need to uncoil flex, insulate a majority of the pipe, or protect the insulation when installing. A smooth inner means less creosote buildup.
